HOW CONSTRUCTION SHOULD BE!

The technological advance in perfect two-layer floors!

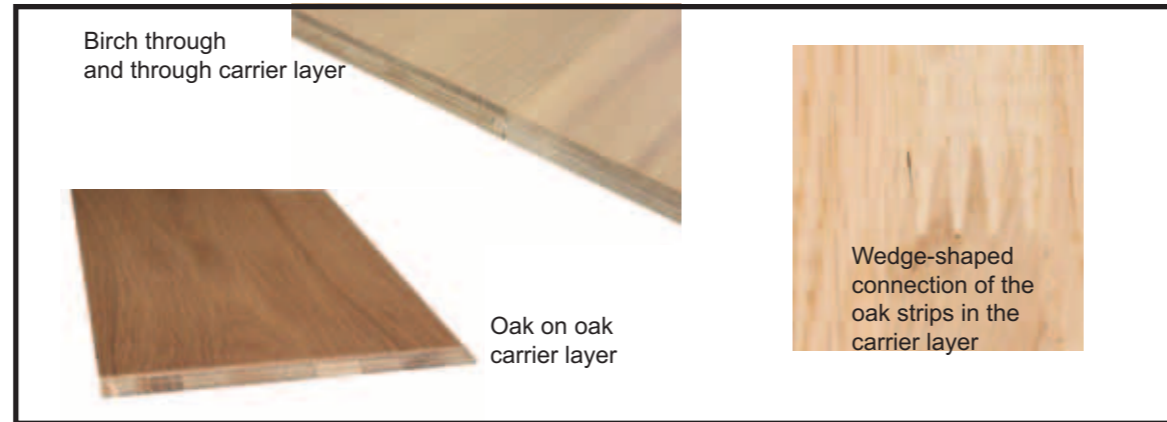

For a long time, rustic floorboards and prefinished parquet were produced in 3-layer construction. The industry had to live long enough with the disadvantages of this technology:

Form stability and panel thickness often led to dissatisfaction.

Now all that is over! With the new "in-between" technology, we have succeeded in producing perfect rustic floorboards and prefinished parquet in just 2 layers.

Thus we achieve a significantly lower panel thickness, whilst also increasing form stability.

On the one hand, the secret lies in the choice of material for the carrier layer: for this we use birch through and through for the multiplex, and oak for our "twiface" product family.

The second feature specific to "twiface" is the special wedge-shaped connection of the oak strips in the carrier layer.

Whether birch through and through or wedge-shaped oak, the form stability produced is outstanding and the panel thickness is unequalled.

Thus Inbetween floors are also suitable for heated floors; additionally, the oak on oak floors is ecologically valuable, as the entire wood resource is used.

We can proudly offer you 3 inbetween product families:

Twiface – technical floorboards for renovations, Sanssouci – the established rustic floorboard line and our range of HKS floor-branded untreated parquet floorboards.

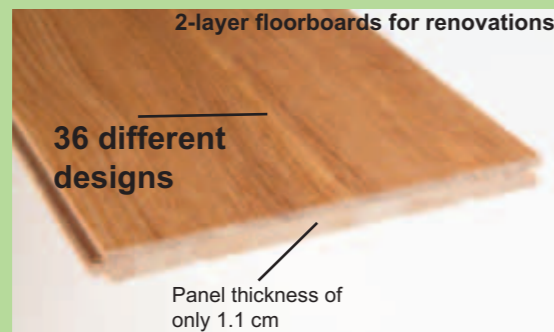

The perfect 2-layer floor for every purpose, at prices that will astound you:

Only HKS can do this!

twiface The perfect floorboards for renovations

Innovative wooden floors with a rustic character, specifically intended for independent renovations.

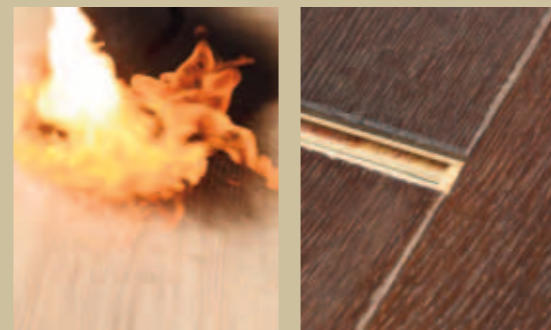

Unique designs that offer the best value for money on the market.

HKS Sanssouci floor Modern matured wooden floorboards

Modern matured by firing if desired. Impressive appearance, with the secondary effect of an especially hard surface as the soft growth rings are hardened by the flame.

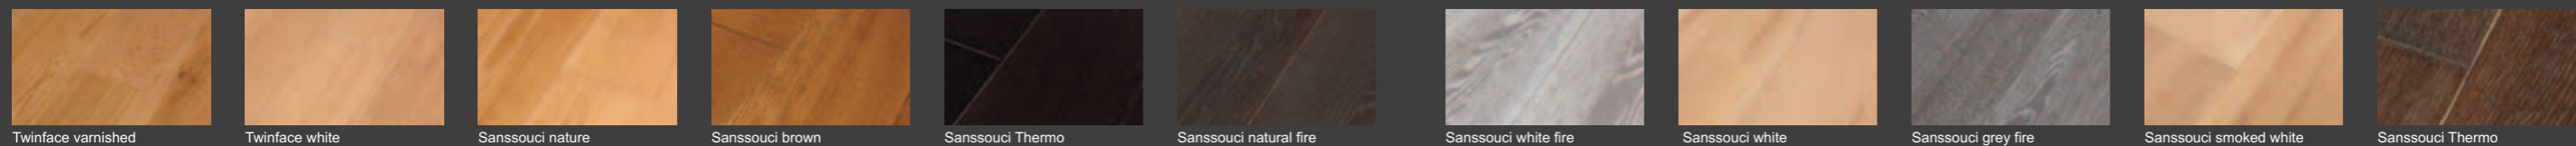

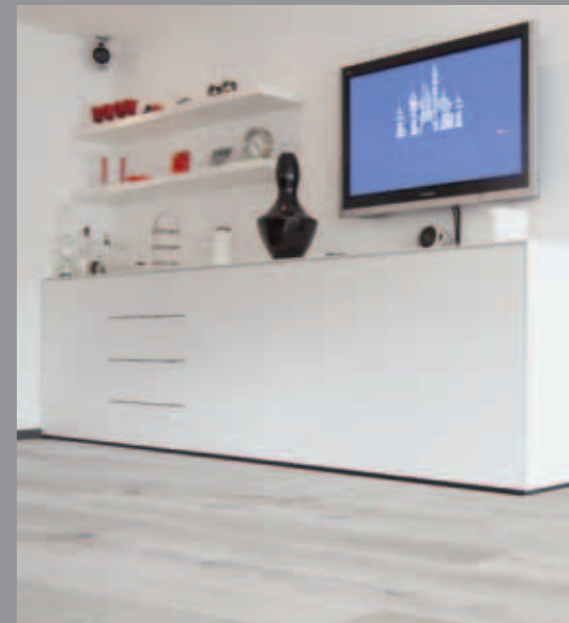

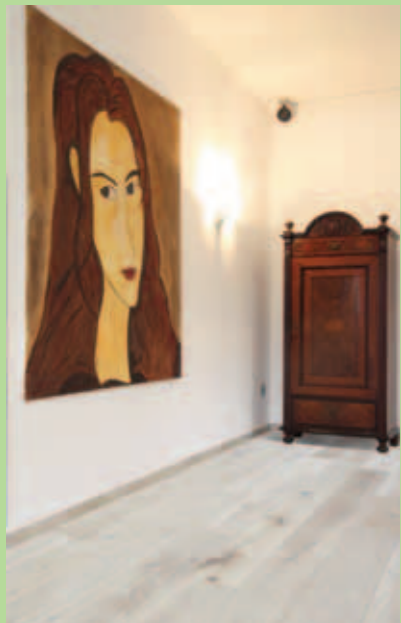

Alternatively, you can also get Sanssouci with hand-hammered edges. This gives the floor an especially original character.

HKS floor Parquet boards with a natural finish

Untreated or lightly brush-finished and with a carrier plate of birch through and through (Multiplex).

There is therefore no chance of the oak surface becoming deformed but you are completely free to have the exact surface finish you desire.
